LEAD WATER SERVICE ABATEMENT GRANT PROGRAM

The Lead Water Service Abatement Grant Program was created to reimburse property owners a portion of qualifying costs for replacing their private lead water service. Funding is available for property owners that are required to replace their lead water service to allow the City of Mayville to meet Wisconsin DNR requirements for the Clean Water Loan program.

For 2018 - the Water/Wastewater Commission has approved a reimbursement allowance up to \$50 per linear foot of pipe installed or \$3,500 (whichever is lower) for each lead water service replacement.

How the program works:

1. Hire a qualified contractor to replace your lead water service. A list of contractors has been included to assist you with your selection process. The contractor you hire to do the work is entirely your decision (you don't have to pick from this list).
2. Obtain a building permit for the water service replacement from City Hall.
3. Schedule the water service replacement with your contractor.
4. After the new water service has been installed but before it has been buried, contact the City of Mayville building inspector (Rob Froh - 920-382-6202) to complete an inspection of your replaced water service. This inspection must be completed to verify the water service has been replaced.
5. Fill out the attached **Application for Reimbursement** within 30 days of the date on the paid invoice and return to the City of Mayville Utilities. Your application must be accompanied by an itemized invoice and paid receipt. **All work must be completed and paid for before reimbursement application is submitted.**
