Forward-Facing Seat

Mid-point of the back of the head is not above the top of the plastic shell

The harness straps at or **above** the shoulders and not twisted

The straps are snug and you cannot pinch the strap material

The harness chest clip is level with the armpits

Once installed the car seat should not move more than one inch when pulled side to side at the belt path

- Use the top tether strap (refer to car manual for proper placement)
- If combined weight of the seat and child reaches 65 pounds or greater the seat should be installed using the seatbelt and not the lower anchors
